TITLE: Data Obtained From Raccoon Count (Materialy po uchetu  
chislennosti yenotov)

PERIODICAL: V sb: Akklimatiz. pushnykh zverey v Kirgizii, Frunze,  
1956, pp 107-112

ABSTRACT: A group of 22 raccoons was released in 1936 in the  
Gavinskiy forest farm. In 1952-53, 100 of these  
animals were found in the Kara-Alminskiy forests of  
Arslanbob, within an area of 100 sq km around the  
place where the first group had been released. The  
second group, which was released in late autumn, when  
the supply of walnuts had diminished, wandered all  
winter in search of food. As a result, most of them  
perished. It is not inbreeding, but the long period

BEYSOVA, M.P.

Method of titrimetric determination of hardness.  
M.P. Beysova, M.P. Kiseleva and P.A. Kiseleva. *Trudy  
Vsesoyuznogo Nauchno-Issledovatskogo Instituta  
Vodopriemnoy i Vodoopasnykh Stroyaniy*, 1964, No. 1, p. 10.  
For det. hardness in water samples containing more than 100 mg/l.  
residual hardening substances. The method is based on the use of  
best of 3 hardness indicators tabulated. In acid medium the  
indicator is red-orange, changing to light blue at pH 10-11. This  
light blue, typical of alk. medium in absence of Mg ions, is  
best of the colors for identifying the end of the reaction.  
Second transition of color is at pH 11.5 to 12.0, when the  
indicator becomes dark blue-black. The sharpness of the  
at pH 10 to 11, in the optimum range, or rather colorless  
color. In alkaline medium in presence of Mg ions, it turns  
wine-red. But waters with high carbonate index need to be  
slightly acidified for the test. In titrating soda, alkali  
ions only, a certain amt. of Mg salt soln. must be added.  
Differing proportions of  $Ca^{++}$  and  $Mg^{++}$  in soln. do not  
affect the accuracy of present method. Slight deviations  
(-0.1% to +1.0%) in hardness of natural waters, meas-  
ured by conventional analyses and by titrimetric method,  
are tabulated. The accuracy of titrimetric method is  
affected by presence of some ions, esp. iron, in excess of 1  
mg/l. (not 20 mg/l. as stated in literature). To remove  
org. iron compds. (and only Mn ions present),  $KMnO_4$   
was added; ammonia was added until methyl red turned  
orange; 3 to 4 drops of ammoniac were added. The soln.  
was heated to 80-90°C.  $KMnO_4$  soln. was added until the  
pink color remained for 15 min. One drop of 5%  $NaOH$   
added to remove  $KMnO_4$  and the soln. was heated to 80-90°C.  
The soln. was cooled to 20-25°C. It was then titrated with  
0.01N EDTA soln. The color of the soln. changed from wine-red to light blue.

147. THERAPEUTIC ACTION OF A DIET WITH REDUCED SALT CONTENT IN HYPERTENSION (Russian text) - Beyul B. A. and Ekisenina N. I. Inst. of Nutrit., USSR Acad. of Med. Sci., Moscow - VOPR. PIT. 1957, 16/1 (23-28) Tables 3

The influence of therapeutic diet No. 10 (Clinic Reference No.), in accordance with the system of the Clinic of Therapeutic Nutrition of the Institute of Nutrition of the USSR Academy of Medical Sciences, on clinical manifestations of hypertension in its various stages in patients without obvious circulatory and renal insufficiencies was studied. A total of 129 hypertensive patients, comprising 73 men and 56 women aged from 23 to 58 yr., was investigated. Stage I hypertension was observed in 25 subjects, stage II in 79 and stage III in 25 persons. Patients received a general diet (No. 15) during the first 7 to 10 days. The chemical composition of this diet

147

was: proteins 100 g., fats 100 g., carbohydrates 500 g., salt not being restricted. In 7 to 10 days following ascertained stability in the arterial pressure which was due to rest (without using therapeutic nutrition) the patients were changed to diet No. 10. The chemical composition of this diet was: proteins 80 g., fats from 80 to 85 g., carbohydrates from 400 to 450 g., total calories 2,500 to 3,000. The amount of free fluid allowed was 800 ml. All dishes were prepared without salt, the salt content in foodstuffs amounting to about 2 g. The following foods were allowed: unsalted white and black bread, milk and vegetarian soups and fruit compote, non-fatty stewed meat and fish, any milk products, egg dishes to a limited extent, vegetables and greens and also a choice of raw or stewed berries or fruit, unleavened flour products, dry tarts, butter, vegetable oil and white sauces. It was established that the diet No. 10 is hypotensive in its action and that it improves the condition of hypertensive patients whether or not they have cardiovascular insufficiency. The most pronounced effects of treatment with this diet were observed in stage II of hypertension. In order to ascertain the influence of the diet No. 10 on hypertension in stage I it is necessary to investigate the particular requirements in relation to the dynamics of the nervous and cardiovascular systems. A lesser effect is observed with the use of the diet in the last stage of hypertension. Radical changes of salt content in food aggravate the hypertensive condition and contribute to a rise in blood pressure. In the course of the treatment for hypertension there should be a gradual change from a salt-free regime to a diet of normal salt content. References 26.

TITLE: Valuable Food Products

PERIODICAL: Nauka i zhizn', 1959, Nr 9, pp 17 - 20 and p 2 of  
centerfold (USSR)

ABSTRACT: The authors report in detail on fruits and vegetables  
as being valuable food sources. They underline the im-  
portance not only of the presence of all necessary  
mineral substances in the food but also of their proper  
ratio. They give well-known instructions for using the  
different sorts of fruits and vegetables and for pre-  
serving the nutritive value and the vitamins in the pre-  
paration of food. During the Seven-Year Plan, the  
yield of fruits and berries will increase by two times  
and grapes by four times as compared with 1958. The

| COMMON ELEMENTS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |  |  |  |  |  |  |  |  | OPEN                          |  |  |  |  |  |  |  |  |  | MATERIAL NUMBER    |  |  |  |  |  |  |  |  |  |
| <p> <b>CL BEYER, V.A.</b><br/> <b>Protein fractions of blood plasma in parenchymatous hepatitis. V. A. Beyer. <i>Klin. Med.</i> (U.S.S.R.) 22, No. 5/6, 55-9(1944).</b> — In parenchymatous hepatitis there is a relation between the severity of the disease and the various biochem. indexes. General protein level drops with the decrease of fibrinogen and albumin. The changes occurring in acute cases in spite of easy course of the disease make it necessary to beware of complications because of the severity of biochem. changes. G. M. Kosolapoff </p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |  |  |  |  |  |  |  | <p>11G</p>                    |  |  |  |  |  |  |  |  |  |                    |  |  |  |  |  |  |  |  |  |

"Pentoxyl and Its Use in the Treatment of Diseases That Are Associated With Leukopenia," Prof V. A. Beyer, Prof N. V. Lazarev, Honored Scientist, G. I. Felistovich, and Prof K. L. Khilov, Honored Scientist, Leningrad

Sovetskaya Meditsina, Vol 17, No 2, pp 34-36

Clinical tests reveal that pentoxyl is therapeutically valuable drug. It is conducive to formation of leukocytes and particularly of granulocytes in animals suffering from leukopenia.

---

247T32

Pentoxyl is a white, cryst powder, bitter in taste and slightly irritating to the mucous membrane of the mouth. This preparation offers great encouragement when used in combination with penicillin. Pentoxyl produced no positive results in acute leukosis or in aplastic anemia. In 1951, the pharmacol committee of the Sci Med Council of the Min Public Health USSR authorized the chemical pharmaceutical industry to manufacture pentoxyl.

USSR/Medicine - New Drugs

"The Clinical Application of Pentoxyl (I)," Prof V.A. Beyer; N.V. Butomo, Cand of Med Sci (Leningrad)

Klin Med, Vol 31, No 8, pp 9-13

Describes exptl use of a new drug, I (5-hydroxy-methyl-4-methyluracil), synthesized in the lab of Prof N.V. Lazarev. I is used primarily in the treatment of leukopenia. An average dosage of 0.2 [g] three times a day produced an increase in leucocytes (granulocytes). I was found effective in cases of functional disturbances, and

273T46

less effective in cases of organic changes of blood-forming organs. No marked toxic effects of I have been observed.

[Waste and defects in casting using investment patterns]  
Brak i defekty v lit'e po vyplavlennym modeliam. Moskva,  
Gos.nauchno-tekhn.izd-vo mashinostroit.lit-ry, 1959. 70 p.  
(MIRA 12:7)

(Precision casting)

ALOV, Aleksey Aleksandrovich; BEYER, Yu.V., inzh., red.; UVAROVA, A.F.,  
tekhn.red.

[Theory of welding processes] Voprosy teorii svarochnykh  
protssessov. Moskva, Gos.nauchno-tekhn.isd-vo mashinostroit.  
lit-ry, 1959. 158 p. (MIRA 12:8)  
(Welding) (Metallography)

FILIPPOV, Viktor Vasil'yevich; ~~SHKHTER~~, Viktor Yakovlevich; OLENEV,  
Vladimir Ivanovich; BEYLER, Yu.V., inzh., red.; GIKERNOVA, Z.I.,  
tekhn.red.

[Mechanization and automatization of the die stamping of sheet  
metal] Mekhanizatsiia i avtomatizatsiia listvoi shtampovki.  
Moskva, Gos.nauchno-tekhn.izd-vo mashinostroit.lit-ry, 1960.  
184 p. (MIRA 13:3)  
(Sheet-metal work--Equipment and supplies)  
(Automatic control)

LANDA, Aleksandr Fedorovich, prof., doktor tekhn.nauk; IVANOV, D.P., doktor tekhn.nauk, retsenzent; BEYIER, Yu.V., inzh., red.; GORDEYEVA, L.P., tekhn.red.

[Principles of the production of high quality cast iron; composition, structure, heat treatment] Osnovy polucheniia chuguna povyshennogo kachestva; sostav, struktura, termootrabotka. Moskva, Gos.nauchno-tekhn.izd-vo mashinostroit.lit-ry, 1960. 237 p. (MIRA 13:9)  
(Cast iron--Metallurgy)

GOKUN, Vladimir Borisovich; STANKEVICH, V.G., inzh., retsenzent;  
REYER, Yu.V., inzh., red.; BARYKOVA, G.I., red.izd-va;  
CHERNOVA, Z.I., tekhn.red.; TIKHANOV, A.Ya., tekhn.red.

[Fundamentals of technological preparation for production in  
the manufacture of machinery] Osnovy tekhnicheskoi podgotovki  
proizvodstva v mashinostroenii. Moskva, Gos.nauchno-tekhn.  
izd-vo mashinostroit.lit-ry, 1960. 663 p.

(MIRA 14:2)
